ANALGESIC MEDICATIONS

Highlights

- Ultram 100mg = Tylenol 1000mg as effective than ibuprofen 400mg [More info](#)
- Tramadol is less effective than Vio in acute pain [More info](#)
- Reasons to avoid Demerol [More info](#)

Contents

Treatment optionsAcetaminophenSalicylatesNSAIDsNSAID COX 2 InhibitorLower potency narcoticsStronger narcoticsAdjuvant medicationsWebsites

Treatment options (refer to information presented in following sections for efficacy and dosing information)

Mild Pain - Acetaminophen, Salicylates, NSAIDs, Adjuvant Medications (selected situations such as neuropathic pain)

Moderate Pain - All of the above as well as weak opiate/opioid drugs (i.e. codeine, oxycodone)

Severe Pain - Strong Opiate/opioids (i.e. morphine, hydromorphone, levorphanol) +/- all of the above

- Chronic, continuous pain warrants use of scheduled administration times instead of prn dosing, and use of extended release analgesic preparations
- Immediate release (IR) dosage forms are appropriate for treatment of acute or episodic pain, or to improve analgesia during breakthrough pain
- NSAIDs in combination with opioids may be helpful for pain resulting from bone metastases.
- Corticosteroids (i.e. dexamethasone) may be helpful for situations involving nerve compression or increased intracranial pressure
- Antidepressants and anticonvulsants have been used in neuropathic pain

Primary Headache Disorders

Highlights

- Tailor migraine Rx to severity of headache or prior response [More info](#)
- Use abortive therapies no more often than twice weekly to prevent chronic daily headaches [More info](#)
- NSAIDs and Excedrin Migraine are first line for patients with mild-moderate migraine. [More info](#)
- Use migraine-specific agents (triptans, DHE, ergotamine) in patients with more severe headaches or if unresponsive to NSAIDs and OTC analgesics [More info](#)
- Diclofenac K⁺: Equal efficacy but less nausea than sumatriptan 100mg [More info](#)
- NSAID/metoclopramide as effective as oral sumatriptan for moderate-severe migraine [More info](#)

Site of pain	Hemicranial, bilateral	Bilateral, occipital, frontal	Unilateral, frontotemporal, orbital

1647

Fig 25

163

- Diclofenac potassium: Equal efficacy but less nausea than sumatriptan 100mg (Anon. Cephalalgia 1999;19(4):232-40) Diclofenac potassium 50mg costs less than sumatriptan 100mg (less than \$2 vs \$34).
- ASA 900mg plus metoclopramide 10mg (<\$2) as effective as sumatriptan 100mg (\$32) in the treatment of moderate-severe migraine. (Tfelt-Hansen P. Lancet 1995;346:923-26) (Anon. Eur Neurol 1992;32:177-84)
- **SC sumatriptan associated with more headache recurrence than DHE nasal spray.** Sumatriptan 6mg SC provided better relief of headache and associated symptoms than DHE nasal spray 1mg, however headache recurred more commonly after treatment with sumatriptan (31% vs 17%). Because the dose of DHE used in this study is below the recommended dose of 2mg, it is difficult to compare the efficacy for headache relief. (Touchon J. Neurology 1996;47:361-5) Patients with long duration headaches may benefit from intranasal DHE.
- **Oral sumatriptan more effective than ergotamine/caffeine, but has higher recurrence rate.** In a RCT involving 486 patients, improvement in pain at 2 hours occurred in 66% of patients treated with oral sumatriptan vs. 48% of patients treated with a combination of ergotamine and caffeine (Cafergot®). However, headaches recurred in 41% in the sumatriptan group, compared to 30% of the ergotamine/caffeine group. Side effects were comparable. (Anon. Eur Neurol 1991;31:314-22)

- Guidelines
- Drug table

167

Fig 26

Acute treatment of migraine attacks: efficacy and safety of a nonsteroidal anti-inflammatory drug, diclofenac-potassium, in comparison to oral sumatriptan and placebo

Anon. Cephalgia 1999;19(4):232-40

Study design: Double-blind, cross-over RCT in 156 adults with migraine +/- aura (2-6 migraines/month)

Intervention: diclofenac-K 50mg vs diclofenac-K 100mg vs sumatriptan 100mg vs placebo (all patients received all four treatments over a period of 3 months)

Results: Headache pain 2 hr after dosing (based on VAS): both doses diclofenac and sumatriptan superior to placebo, diclofenac 50mg=100mg, both doses diclofenac=sumatriptan. Active treatments equally effective to each other and superior to placebo over 8 hour observation period. Significant pain relief occurred at 60 min with diclofenac vs. 90 min with sumatriptan. There was no difference between active treatment groups in the use of rescue medication (36% vs 41%). There was no difference between groups in rate of headache recurrence (22-24% for diclofenac, 26% for sumatriptan, and 19% for placebo), however the increased use of rescue medication in the placebo group could have confounded these results. At 2 hr after dosing, there was less nausea in diclofenac groups compared to sumatriptan and placebo groups (22-27% vs 41-43%). At 8 hr after dosing, there was less nausea in the diclofenac and sumatriptan groups compared to placebo (diclofenac 15-19%, sumatriptan 28%, placebo 39%). At 2hr after dosing, there was less vomiting in the diclofenac and placebo groups compared to the sumatriptan group (2hr: 3-7% vs 13%). At 8hr after dosing, vomiting was decreased in the diclofenac groups compared to sumatriptan (2-4% vs 10%). More adverse events occurred in the sumatriptan group compared to the other groups (31% vs 12-18%), however there was no difference in the rate of discontinuation due to adverse events. Dizziness, paresthesia, asthenia, and tachycardia appeared to occur more commonly in the sumatriptan group.

Comments: Severity of migraines and some pertinent baseline characteristics (i.e. number of headaches treated, use of prophylactic medications) not described. Did not report % of patients with relief of headache pain.

Conclusion: This study demonstrated equivalence of diclofenac-K and high-dose sumatriptan for headache relief, with a slightly faster onset for diclofenac. Nausea and vomiting were reduced in the diclofenac groups compared to the sumatriptan group.

Fig 27

Talking Points with Patients

The patient educational handouts emphasize the following points ..

- 1 It is important to guide expectations at the outset, to allow 8 months for medications to work. This figure is of 164 pts treated with tretinoin or tretinoin and oral minocycline. In time, most patients achieve successful outcomes. But those patients who cannot accept the need to wait 3 to 5 months for results will usually be disappointed. Adapted from Cunliffe, WJJ Eur Acad Derm 1992;1 43-52 and Katsambas et al Acta Derm Vener 1989 S143 35-9
- 2 Stress compliance with Rx in light of anticipated initial worsening
- 3 Discourage excessive washing/scrubbing of face. Medicated soaps are a waste of money

Fig 28

PATIENT CONSENT FORM:

To be completed by the patient, her parent/guardian*
and signed by her prescriber.

Please read each item below and initial in the space provided to indicate that you understand each item and agree to follow your prescriber's instructions **DO NOT SIGN THIS CONSENT AND DO NOT TAKE ACCUTANE IF THERE IS ANYTHING THAT YOU DO NOT UNDERSTAND.** A parent or guardian of a minor patient must also read and understand each item before signing the consent.

1. I, _____
(Patient's Name)

understand that Accutane is a very powerful medicine with the potential for serious Adverse Effects that is used to treat severe nodular acne that did not get better with other treatments including oral antibiotics.

INITIALS: _____

2. I understand that I must not take Accutane (isotretinoin) if I am pregnant. I understand that I must not take Accutane if I am able to become pregnant and I am not using the required two separate forms of effective methods of birth control

INITIALS: _____

3. I understand from my prescriber that although not every fetus exposed to Accutane has resulted in a deformed child, there is an extremely high risk that my unborn baby could have severe birth defects if I am pregnant or become pregnant while taking Accutane in any amount even for short periods of time. Potentially any fetus exposed during pregnancy can be affected.
